

RFID Sticker Applications

FoodSpot

UNATTENDED MICROSTORES

How does RFID work?

RFID stickers communicate information to nearby sensors. Operators are equipped with a sensor in the form of a bluetooth scanner which they use to enter food items into their dashboard. When items are placed in the refrigerator, RFID sensors on the shelf keep track of inventory.

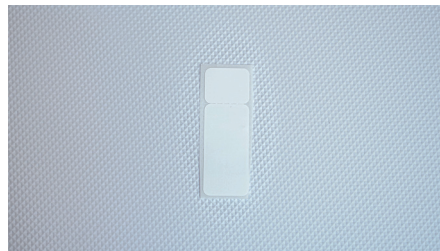

We use 3 types of RFID stickers.

Cold

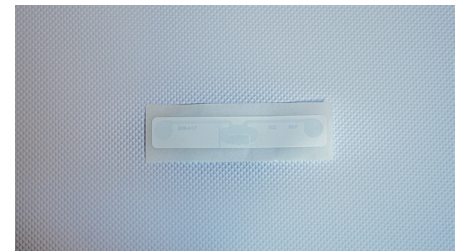

Salads/Sandwiches
Parfaits & Bars
Bottled Drinks
½ Gallon Milk
Take & Bake Items
Meal Kit Boxes

Metal

Soda Cans
Aluminum Trays
Foil Lined Products

Microwaveable

Hearty Entrees
Sandwiches
Soup
Breakfast Burrito/Pastry
Protein Add Ons

Stick, Scan & Stock

In a matter of minutes you can create new food items on your FoodSpot dashboard and have the stickers ready for your kitchen team to apply. Stickers instantly upload new inventory as soon as the fridge is stocked.

Pricing (as of June 1, 2022)

- 1,000 for \$0.25 each
- 5,000 for \$0.20 each
- 10,000+ as low as \$0.15 each

You may also purchase directly from our suppliers in volumes as low as 1,000 units.
